📗 Facilitator

Lab Timing Guide

Minute-by-Minute Schedule — Day 1 & Day 2

Copilot Studio Workshop · Generated April 28, 2026

Lab Timing Guide

Facilitator assumptions

- **Format:** Two-day instructor-led Copilot Studio workshop for a mixed audience of makers, IT pros, and developers.
- **Suggested day length:** 9:00–16:30 local time.
- **Core workshop rule:** Keep the shared path on generally available capabilities, with **GPT-5 Chat** as the recommended hands-on model. Mention GPT-4.1 only as a comparison point when participants need platform context.
- **Target pacing:** Aim for roughly **40/60 demo-to-hands-on on Day 1** and **35/65 on Day 2**.
- **Setup buffers:** Protect the opening **20 minutes on Day 1** and **15 minutes on Day 2** for sign-in, environment fixes, and room alignment.
- **MCP:** GA capability — use the in-product onboarding wizard only, no preview paths.

Day 1 timing: Labs 00–12

Time	Duration	Module focus	Labs	Demo / hands-on	Facilitator cues	Recovery option
9:00–9:20	20 min	Arrival, access, room baseline	00	25 / 75	Use the opening buffer for sign-in, environment checks, and blocker triage before any build work starts.	Skip long introductions and move directly into access support by table.
9:20–9:45	25 min	Agent value and interface tour	01	40 / 60	Demo the core surfaces once, then let participants mirror the path in their own tenant.	Convert the tour to instructor-led callouts if too many learners are still finding the UI.
9:45–10:20	35 min	Studio foundations and declarative patterns	02–03	45 / 55	Keep the **Activity** tab demo short and tie it directly to later diagnostics.	Collapse the declarative comparison into a whole-room walkthrough and

Time	Duration	Module focus	Labs	Demo / hands-on	Facilitator cues	Recovery option
						protect keyboard time for fundamentals.
10:20–10:35	15 min	**Break**	—	—	Use the pause to clear any environment drift before solution work begins.	Preserve the break and recover time by shortening the next concept explanation.
10:35–11:00	25 min	Solutions and reusable patterns	04–05	40 / 60	Emphasize packaging, reuse, and what should travel together when teams hand work off.	Keep learners on one sample pattern and defer deeper comparison until Q&A.
11:00–12:00	60 min	Custom agent build and grounding	06	30 / 70	This is the longest Day 1 build block — roam aggressively and checkpoint at the 30-minute mark.	Provide prewritten starter instructions or a preselected knowledge source if the room stalls.
12:00–13:00	60 min	**Lunch**	—	—	Use lunch to reset the demo tenant and spot-check any partially blocked accounts.	Protect lunch if possible; recover later by tightening publish discussion.
13:00–13:40	40 min	Topics and triggers	07	35 / 65	Coach learners to build one clean topic path before adding optional branches.	Give the room a shared trigger set and reduce branching choices.
13:40–14:10	30 min	Adaptive Cards	08	35 / 65	Demo one card that improves data quality and keep the JSON or designer work narrow.	Convert card building into a facilitator-led show-and-tell if too many learners get stuck in formatting details.
14:10–14:45	35 min	Agent flows	09	40 / 60	Expect the most connector questions here — use paired	Switch to a facilitator demo if more than one-

Time	Duration	Module focus	Labs	Demo / hands-on	Facilitator cues	Recovery option
					troubleshooting rather than repeated whole-room resets.	third of the room blocks on connection setup.
14:45–15:00	15 min	**Break**	—	—	Confirm the room knows the final Day 1 goal before publish and licensing.	Keep the break and shorten the post-break recap to one minute.
15:00–15:25	25 min	Event triggers	10	35 / 65	Keep the trigger story simple and visibly tied to a business event.	Run the event path as an instructor demo if tenant variability is slowing the room.
15:25–15:55	30 min	Publish readiness and channel review	11	45 / 55	Focus on readiness signals, admin dependencies, and supported channel planning (Teams, Microsoft 365 Copilot, WhatsApp, web) instead of forcing every learner to publish.	Convert the block into checklist review if channel permissions vary widely.
15:55–16:30	35 min	Licensing, credits, ROI analytics, Day 2 prep	12	55 / 45	Close with commercial readiness, ROI analytics talking points, and the Day 2 prerequisite reminder.	Keep the discussion scenario-based and defer pricing deep dives to follow-up.

Day 2 timing: Labs 13–25

- **Core shared path:** Labs 13–24 for the full room.
- **Optional/stretch path:** Lab 25 runs only for developers who are caught up on the core path, while the main room stays on evaluation recap, ROI analytics, and next-step planning.

Time	Duration	Module focus	Labs	Demo / hands-on	Facilitator cues	Recovery option
9:00–9:15	15 min	Restart buffer and scenario reset	13 prep	35 / 65	Reconfirm prerequisites, target environment, and the Loan Processing Agent scenario before any edits begin.	Skip the long Day 1 recap and use one-slide carry-forward only.
9:15–9:40	25 min	Loan Processing Agent setup	13	35 / 65	Get everyone to the same starting state quickly so the rest of Day 2 stays synchronized.	Hand slower learners a pre-staged agent while the room keeps moving.
9:40–10:10	30 min	Instructions and multi-agent design	14–15	40 / 60	Keep the discussion on boundaries, delegation, and maintainability rather than style debates.	Provide starter instruction text and a simplified delegation map.
10:10–10:20	10 min	Trigger automation reset	16 prep	50 / 50	Use a short reset to explain the next automation path before the class clicks through it.	Trim the explanation to one concrete business event if time is tight.
10:20–10:35	15 min	**Break**	—	—	Use the pause to clear automation blockers before model and safety work.	Preserve the break and recover time by shortening the next demo.
10:35–10:55	20 min	Trigger automation	16	35 / 65	Keep the automated path small enough that learners can explain the outcome.	Demo the trigger once centrally and let tables validate only the final state.
10:55–11:15	20 min	Model selection	17	40 / 60	Use **GPT-5 Chat** as the working baseline; reference GPT-4.1 only when a direct comparison clarifies the decision.	Limit the room to two models and skip optional extras.

Time	Duration	Module focus	Labs	Demo / hands-on	Facilitator cues	Recovery option
11:15–11:45	30 min	Content moderation and guardrails	18	45 / 55	Demonstrate layered safety, including per-prompt content moderation (single Low/Moderate/High slider) where relevant to specific prompts or tools.	Run the red-team prompts as a shared instructor exercise if the room is drifting.
11:45–12:00	15 min	Multimodal setup buffer	19 prep	40 / 60	Use this short block to verify the sample documents or images are ready before the afternoon stretch.	If assets are missing, convert the next lab to facilitator demo mode early.
12:00–13:00	60 min	**Lunch**	—	—	Check Dataverse, SharePoint, MCP wizard, and evaluation readiness before the afternoon labs begin.	Protect lunch if possible; recover later by tightening the feedback discussion.
13:00–13:25	25 min	Multimodal prompts	19	35 / 65	Keep the exercise on one controlled input and one business outcome.	Use a facilitator-provided sample artifact if participant files are inconsistent.
13:25–13:55	30 min	Dataverse grounding	20	35 / 65	Treat the block as a readiness checkpoint for governed data, not a data-modeling lecture.	Switch to a live demo if permissions vary too much across tables.
13:55–14:25	30 min	Document generation	21	35 / 65	Tie the output to a reviewable lending artifact and ask for one improvement, not endless rewriting.	Provide a fixed template and focus the room on validation

Time	Duration	Module focus	Labs	Demo / hands-on	Facilitator cues	Recovery option
						instead of authoring.
14:25–14:55	30 min	MCP integration	22	45 / 55	Use the GA in-product onboarding wizard; keep tool scope narrow, auditable, and workshop-safe.	Convert the block to facilitator demo if the wizard is missing or blocked for most attendees.
14:55–15:10	15 min	**Break**	—	—	Confirm who is ready for feedback, evaluation, and optional developer branching.	Financial Document on time and collapse recap commentary to essentials only.
15:10–15:30	20 min	User feedback and adoption signals	23	35 / 65	Show how feedback flows into backlog and release decisions instead of leaving it as anecdote.	Run one shared feedback submission and keep the rest as discussion.
15:30–16:00	30 min	**Agent Evaluation & Quality Assurance**	24	40 / 60	Core Day 2 quality block — protect time for pass rate, grader reasoning, and activity-map review. Lab 24 is not optional.	Use a facilitator-run baseline test set if the room cannot finish a full evaluation cycle.
16:00–16:30	30 min	Wrap-up + optional developer branch	25 optional	Main room 60 / 40 · Dev branch 20 / 80	**Main room:** evaluation recap, ROI analytics, and next-step planning. **Developer branch (Lab 25):** VS Code workflow runs in parallel for developers who are	If the room is behind, keep everyone on the core wrap-up and position Lab 25 as post-

Time	Duration	Module focus	Labs	Demo / hands-on	Facilitator cues	Recovery option
					caught up on the core path.	workshop follow-up only.

Fast facilitation rules

- **Demo once, then release:** Aim for 5–8 minutes of demo followed by a visible hands-on timebox.
- **Checkpoint before every break:** Put the current lab number and restart point on screen before the room disperses.
- **Protect core outcomes first:** If time slips, preserve Labs 06, 18, 22, and 24 before optional depth.
- **Use role-based pairing:** Pair a maker with an IT pro or developer whenever access, governance, or extensibility questions surface.

Quick recovery playbook

Situation	Recommended move
More than 20% of the room has sign-in or environment issues	Pause independent work, solve access by cohort, and keep one facilitator screen on the target end state.
Dataverse, SharePoint, MCP wizard, or evaluation is blocked for many attendees	Convert that module to facilitator demo mode immediately and protect the rest of the day.
The class is ahead of schedule	Add extra test prompts, peer demos, or short architecture discussions instead of new scope.
Mixed skill levels are widening	Use buddy pairs, publish clear checkpoints, and narrate the intended done state before each release to hands-on.
Lab 24 runs short	Use remaining time for a second evaluation iteration with a revised prompt set rather than moving to Lab 25 early.
Lab 25 demand is high	Direct developers to start in parallel at 16:00 only; non-developers remain in the main room for ROI analytics and rollout planning.
